Services: Above and Beyond the Expectations

CONNECTING YOUR BUSINESS TO THE RESOURCES YOU NEED

GCE SOLUTIONS OVERVIEW

GCE Solutions has extensive experience in providing Clinical Data Services which includes Statistical Analysis & Reporting, Data Management, Validation, Protocol Development and Process Automation / Standardization. Our team has industry recognized professionals who have assisted our customers to achieve better TCO (Total Cost of Ownership) with productivity gains, automation and high focus on quality & processes. Our qualified professionals & use of innovative methodologies make us stand out when it comes to Data Analytics services. We have proven expertise in providing SAS programming and analysis support for trials in Oncology, Neuroscience, Cardiovascular, Specialty Care, Primary Care, Medical devices and Diagnostic equipments. Our Philosophy is to work with customer as a partner rather than a vendor.

ACD: ACCELERATED CLINICAL DEVELOPMENT

“ACD” is a buzzword introduced by GCE and defines a methodology which helps our customers to achieve significant time reduction for clinical development without compromising on the cost or quality. Our resources are extensively trained to follow this methodology as it’s the backbone of our delivery. The basic approach of this methodology is to work as “empowered SAS programmers”. Empowerment here means to work over and beyond the set expectations and find ways to bring innovation to regular tasks. Some of the examples of ACD methodology are:

- ⇒ Identify clients’ key business needs and pain areas
- ⇒ Validate Requirements at the initial stage
- ⇒ Tool creation / Macro development
- ⇒ First Time Right / Minimum Rework
- ⇒ Metrics based Delivery Model

Flexible Solutions For Your Clinical Data Services Needs

SERVICES

- ⇒ Clinical Data Services
- ⇒ Strategic Global Resourcing and Outsourcing
- ⇒ 3-Step Outsourcing Approach (Onsite /Offsite / Off-shore)

GCE CLINICAL DATA SERVICES

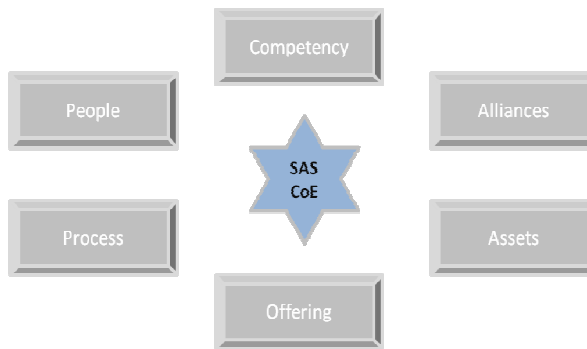

- ⇒ SAS Programming

- ⇒ SAP Creation
- ⇒ CDISC Implementation
- ⇒ SAS Drug Development
- ⇒ Reusable Macro Development
- ⇒ Exploratory and Ad-hoc Analysis
- ⇒ Process Automation/ Standardization
- ⇒ Project Management
- ⇒ Quality Metrics

THOUGHT LEADERSHIP @ GCE SOLUTIONS

SAS CENTER OF EXCELLENCE (COE)

GCE' SAS Center of Excellence is the backbone of our SAS practice. It acts as an interface between different GCE teams to capture best from everywhere and share across teams. It also manages alliances, provides trainings, manages quality metrics and also assists in recruitment. Our ACD methodology is also a brain child of this unit.

GCE'S VALUE DIFFERENTIATORS

- Strong Vision specific to SAS Clinical Data Services– To become most trusted strategic partner, establish long term “partnership” with Pharma and Medical organizations in areas of Statistical Analysis & Programming and Data Management
- Follow ACD methodology, which guides our principle to deliver over and beyond the expectations
- Ability to set up nearsite / offsite / offshore delivery centers to provide competitive cost and strategic advantage. Also most of our resources have experience in executing projects in all three models which provides flexibility to our customers to chose/change to any model which fits their needs
- All our resources have over 5 years of Statistical Programming experience
- SAS COE helps our teams to work in unison. We firmly believe in “**Knowledge by Sharing**”
- Our resources have prior experience with major Pharmaceutical and Medical organizations with understanding of the key pain areas and work culture & dynamics
- Less than 2% attrition rate
- Metrics based delivery model, ability to map our project management processes with clients' processes
- Strong focus on Quantitative and Qualitative data collection for continuous improvement
- High focus on competency building (all our SAS resources are SAS certified, Project Managers are PMP certified)
- Communication protocol (including feedback and escalation processes) as well as clearly defined roles and responsibilities
- Continuous assessment against goals & industry standards and implement processes to close the identified gaps

“I highly appreciate your teams effort in understanding our business needs and adapting to our environment quickly. The innovative processes introduced by your team have resulted in high quality deliverables in a significantly lesser time.”
